

Grinding valve seats from \varnothing 70 to 180 mm

DESCRIPTION

Compression seal is one of the main factors which determine the efficiency of internal combustion engines. This makes the valves and their seats of fundamental importance and if they are worn the efficiency of the engine is reduced.

Working range	\varnothing 70 ÷ 180 mm
Grinding wheel speed rotation	2.800 ÷ 5.600 RPM
Relative motion	8 ÷ 16 RPM
Fixed eccentricity	3,0 mm
Motor power	1.300 W
