

Grinding valve seats from \varnothing 16 to 48 mm

DESCRIZIONE

Compression seal is one of the main factors which determine the efficiency of internal combustion engines. This makes the valves and their seats of fundamental importance and if they are worn the efficiency of the engine is reduced.

Working range	\varnothing 16 ÷ 48 mm
Grinding wheel speed rotation	13.000 RPM
Relative motion	30 RPM
Fixed eccentricity	1,5 mm
Motor power	250 W
