

Grinding valve seats from \varnothing 40 to 90 mm

DESCRIPTION

Compression seal is one of the main factors which determine the efficiency of internal combustion engines. This makes the valves and their seats of fundamental importance and if they are worn the efficiency of the engine is reduced.

Working range	\varnothing 40 ÷ 90 mm
Grinding wheel speed rotation	8.000 RPM
Relative motion	18 RPM
Fixed eccentricity	3,0 mm
Motor power	600 W
